V2 K.WRIGHT Review of BLACKBURN DNA Case File.pdf; K.WRIGHT Addendum Report.pdf;

Good morning Laura,

Please find attached the amended initial report (discussed yesterday) and the addendum report. The addendum report contains more information about the blood screening of the car.

I have also added a second section relating to the analysis I did on the positive controls. You advised that Jo and I could not provide a combined report on this, so I just reported on the part that I analysed (the distribution of the positive control concentration values and how they relate to the BLACKBURN evidence of concern I identified). I hope this is OK. This still enables Jo to report on the analysis she did (the difference in positive control concentrations between extraction methods). There is no overlap, however the two analysis complement each other.

Thank you for all of your help.

Dr Kirsty Wright
